Electrical Systems Technology Program

The Electrical Systems Technology Certificate of Achievement Program is designed for the students who desire employment in electrical work and the opportunity to develop their electrical skills through on-the-job training. Electrical courses are on a non-traditional schedule. Because of the intensity of the program, students will be very close to AAS degree completion and are encouraged to pursue the degree. This program prepares students

to work in diverse industries including mining, manufacturing, power plants, power distribution, construction, sales, machine control, water resource management, gaming, and renewable energy.
